Micro Mold Co. Announces Lifetime Guarantee

Erie based custom mold manufacturer and injection molder now provide a lifetime guarantee on SPI 101+ Tools.

Erie, Pa. (November 1, 2013) – Micro Mold Co. believes that their professional team of mold makers builds the very best tool in the plastics industry; a SPI 101+ Micro Mold designed and built tool affords customers the highest value for their investment dollar when coupled with the engineering and technical production excellence at sister company Plastikos, Inc. As such, Micro Mold is putting their money where their mouth is by providing a lifetime (unlimited production) guarantee for all qualifying Micro Mold designed and built SPI 101+ tools for the duration of the project's production life at Plastikos.

“We know of a number of the tools that Micro Mold’s built in the early-to-mid 1980’s are still in production today - approximately 30 years later with hundreds-of-millions of cycles on them, and counting”, noted Philip Katen (President & General Manager – Plastikos). “The exceptional precision, durability, and longevity of a Micro Mold tool is a testament to the training, technical expertise, and decades of hands-on experience that our engineers and mold makers bring to a project. Thus, it is with great pride that we officially announce our lifetime guarantee program on Micro Mold’s 35th anniversary (founded: 11/01/1978). We have pursued a 100% Made in the U.S.A. strategy from our founding, and know that strategy is a key component to our ability to afford a lifetime guarantee for our customers’ production needs.”

Currently the standard SPI 101 warranty stands at 1,000,000 cycles; the longest publicized warranty of which we are aware that extends above and beyond that standard 1,000,000 cycles is 10 years with unlimited production. SPI (Society of the Plastics Industry) mold classifications are used among many in the industry for estimating the expected life and performance of a mold based on the corresponding design and manufacturing requirements.

About Plastikos, Inc. & Micro Mold Co., Inc.:

Based in Erie, Pa., Plastikos and Micro Mold were founded to solve the most difficult problems that plagued customers and to “Make the Impossible, Possible”. Plastikos (high-precision custom injection molder) and its sister company, Micro Mold Co., (high-precision mold builder) focus on small, tight-tolerance applications for the global medical and electronic markets. Since 1978, these two world-class companies have partnered with customers to push the engineering and technical limits of the plastics industry to serve the medical, electronic, aerospace, defense, telecommunications, automotive, among other industries.
